2ajar: business model, how we make money, and the Growth dashboard

Business Model Canvas · revenue streams and scenarios · Hormozi value equation measured live in the admin.

1. Business Model Canvas

Key partners

- Brokers and agencies (supply)
- Owners, building managers (natours)
- Universities, NGOs, relocating companies (demand)
- Service providers: movers, solar, generators, internet
- Railway / Cloudflare (hosting)

Key activities

- Recruit and onboard listings (do it for them)
- Curate area facts
- Keep listings fresh and honest
- Arabic content and community
- Improve search from logged queries

Key resources

- Arabic/English/Arabizi search
- Living-cost and area data
- Listings and broker network
- Brand trust ("we never guess")

Value propositions

- **Renters:** find a flat by saying what you need, with real bills and area facts
- No surprises: generator, water and safety known before visiting
- **Brokers:** serious, pre-informed inquiries; free setup in 48 h
- Rent anything from an hour to years

Customer relationships

- Founding Partners: personal onboarding, monthly reports
- Self-service for renters
- WhatsApp-first support, bug button

Channels

- Website (Arabic first), mobile
- WhatsApp handoff and alerts
- Reels, SEO area pages
- Outreach to brokers; affiliates

Customer segments

- Renters in Beirut & Mount Lebanon (locals, students, expats)
- Independent owners
- Brokers and agencies
- Short-stay hosts (chalets, day use), later

Cost structure

- Hosting and storage (low, usage-based)
- Outreach and onboarding time; content and photos
- Paid ads (after day 45); support and moderation

Revenue streams

- Featured listings / boosts · Broker & agency subscriptions
- Partner referral fees (movers, solar, internet, generators) · Verification and photo services
- Later: short-stay commission, anonymous rent-index reports

2. How 2ajar makes money (suggested order)

Free during the founding period. Start charging only once brokers can see value in their stats. Pricing is the owner's decision (open question Q1); the prices below are **starting assumptions for the Lebanese market**, to be tested with real partners.

1. Featured listings (boosts)

Pay to appear first in the area's home row and in search for 7 days. Simple and one-off; works for owners and brokers.

e.g. $5 per listing per week

When: from about day 60, once there's traffic

2. Pro subscription for brokers

Free: up to 5 live listings. Pro: unlimited listings, stats and monthly report, verified badge, CSV import, 2 boosts a month.

e.g. $15 / month

When: after broker stats exist

3. Agency plan

Several agents under one agency, with a shared dashboard and leads and an agency page.

e.g. $49 / month

When: with 5+ active agencies

4. Partner referral fees

People who just found a flat need movers, internet, solar or a generator subscription. Recommend vetted partners and earn a referral fee. This fits 2ajar's living-cost data.

e.g. 5–10% or a fixed fee per job

When: once ~100 rentals close per month

5. Verification and photos

A paid owner verification visit and a professional photo shoot.

e.g. $30–50 one-off

When: anytime (also a Founding Partner bonus)

6–7. Later

A short-stay commission once online booking exists (no calendar for now), and anonymous rent-index reports for banks, NGOs and developers (never personal data).

e.g. 8–12% · per report

When: not now

Avoid early: charging renters; pay-per-lead (hard to verify, invites disputes); banner ads (hurt trust).

Payments in Lebanon (Q7): start with invoices paid by Whish Money, OMT, bank transfer or cash in USD; add card payments later.

Sequence

Days 1–60
Everything free. Founding Partners. Build broker stats.

Day ~60
Featured boosts: first revenue, low friction.

Day ~90
Pro and Agency plans; founding partners keep a locked price.

Month 6+
Partner referrals and verification services; later commissions and reports.

3. Revenue scenarios (illustrative)

These use the same formulas as the admin's revenue calculator. The admin version starts from **today's live numbers** and lets you change every assumption. Defaults: Pro $15/month at 30% adoption; boosts $5/week on 10% of listings; referral $20 per closed rental, with 5% of inquiries closing; 4.33 weeks per month.

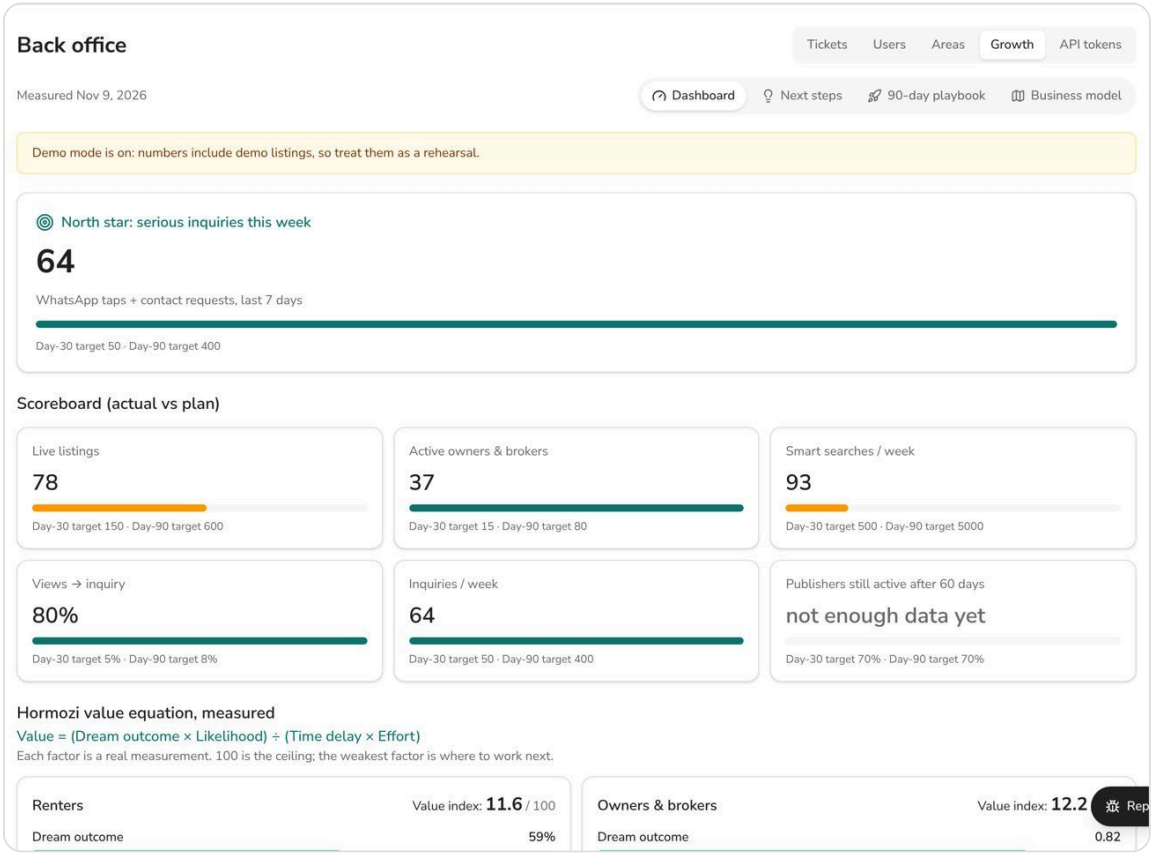

Scenario	Active publishers	Live listings	Inquiries / week	Pro	Boosts	Referrals	Agencies	Total / month
Day-90 targets	80	600	400	$360	$1,299	$1,732	–	**$3,391**
Year 1 (assumed)	300	2,500	1,500	$1,350	$5,413	$6,495	$490 (10 × $49)	**$13,748**

> Assumptions, not forecasts. The biggest levers are inquiries per week (which drives referrals) and how many listings get boosted. Both grow only if the value equation on the Growth page keeps improving.

4. The Growth page in the admin

At **Admin → Growth**, available to staff with analytics access, in Arabic and English. Every number is computed from 2ajar's own data (listings, visits, WhatsApp taps, contact requests, logged searches). When there isn't enough data, it says "not enough data yet" instead of guessing.

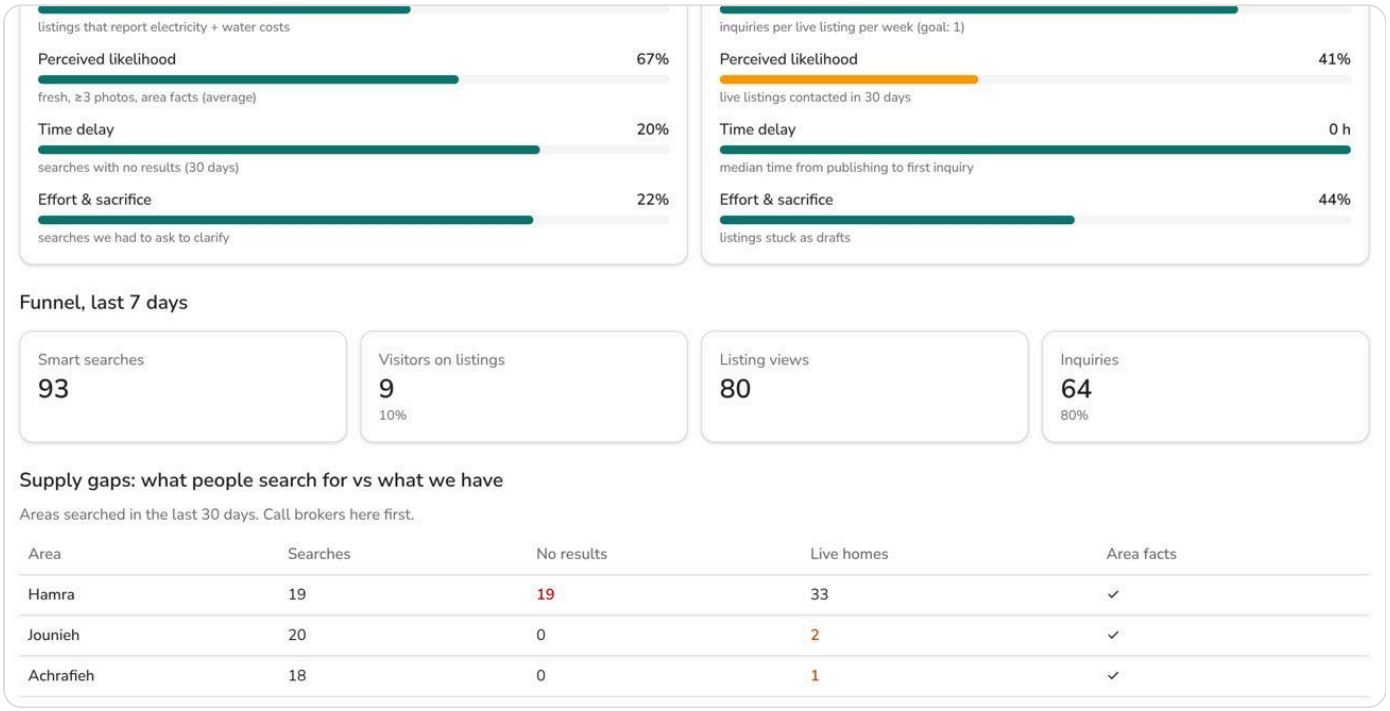

Dashboard: north star, scoreboard, value equation

Hormozi factor	Renters, measured as	Owners & brokers, measured as
Dream outcome	% of listings reporting electricity + water costs	inquiries per live listing per week (goal 1)
Perceived likelihood	average of: fresh listings, ≥3 photos, area facts	% of live listings contacted in 30 days
Time delay	% of searches with no results	median hours from publishing to first inquiry
Effort & sacrifice	% of searches needing clarification	% of listings stuck as drafts

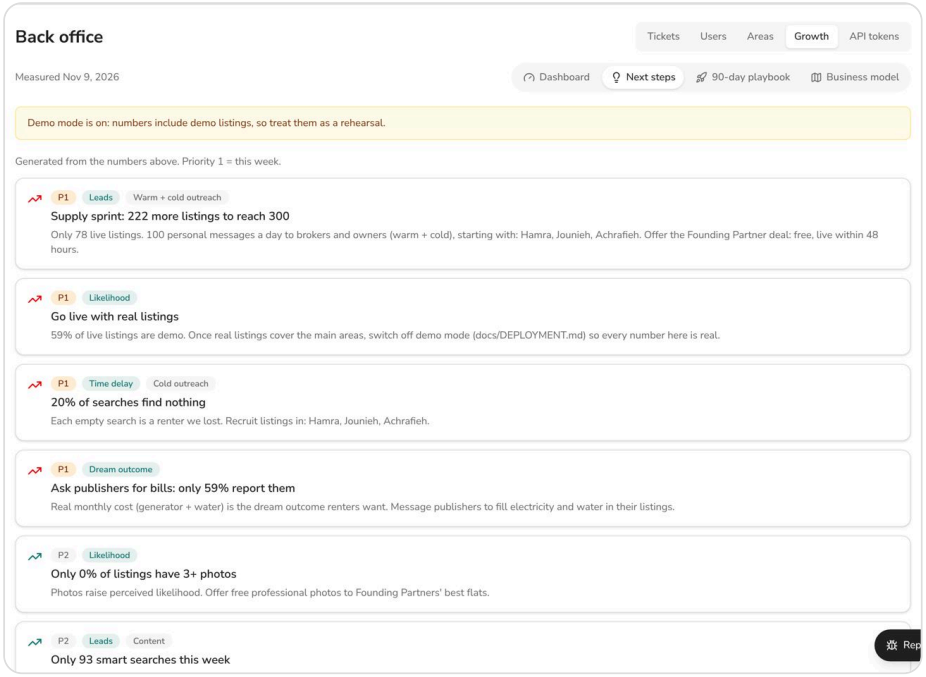

> Value index = 100 × Dream × Likelihood ÷ (Delay × Effort), where Delay and Effort run from 1 (none) to 5 (worst). 100 is the ceiling. The weakest factor is where to work next.

Funnel, supply gaps and wishes vs data

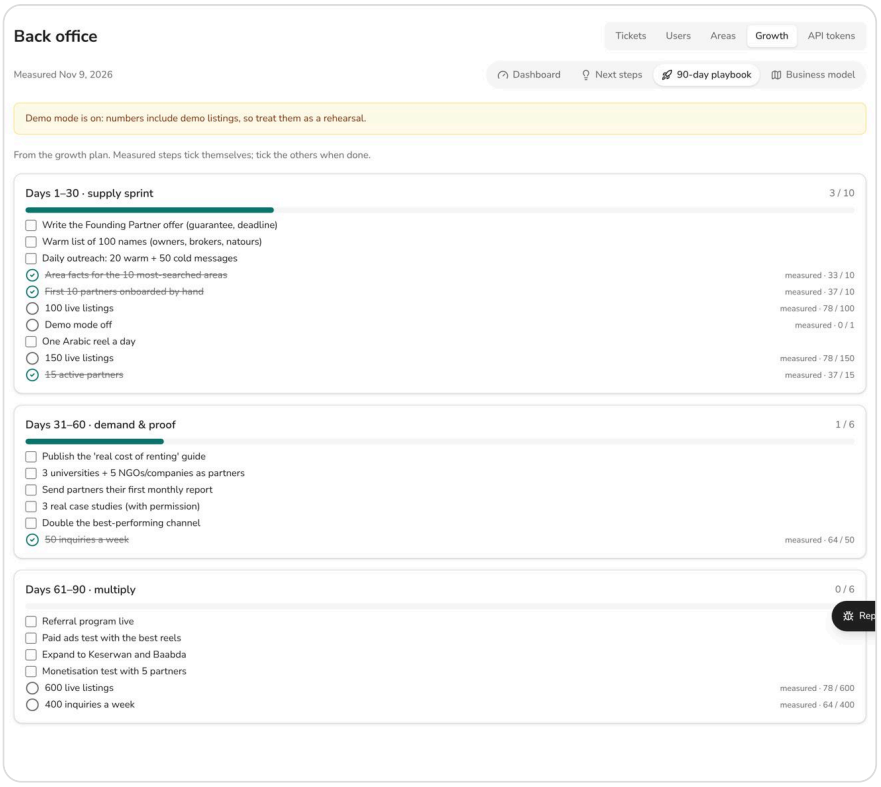

The supply gaps table lists the areas people searched for in the last 30 days, with empty results and the number of live homes there: **this is the list of where to call brokers first**. "Top wishes vs our data" shows what renters ask for (24/7 electricity, quiet…) and how many listings can actually answer it.

Next steps, generated from the data

15 rules turn the numbers into actions. Each action shows its priority (P1 = this week), the Hormozi lever it moves, the Core Four channel, and the evidence. Examples of the templates, with the real numbers filled in on the page: "Supply sprint: [N] more listings to reach 300, starting with [areas with empty searches]", "Ask publishers for bills: only [x%] report them", "[N] popular listings get no inquiries: call the owners".

The 90-day playbook

The plan from the growth PDF as a checklist. Measured steps tick themselves (e.g. "100 live listings", "Demo mode off"). The team ticks the others, and the ticks are saved for everyone.

5. Should we start contacting brokers (السماسرة)? Yes, now.

The marketplace needs **supply first**: renters only come back if there are real, fresh listings. The product is ready for it: broker sign-up, dashboard, CSV import, photo upload, leads with consent, and the Growth page to track progress.

Before the first call (1–2 days):

1. Write the Founding Partner offer: free during the founding period, published within 48 h, a guarantee you can always honour (extra free months), 30 places, a deadline.
2. Get a dedicated WhatsApp Business number for 2ajar, and switch on the Telegram alerts so no lead is missed.
3. Prepare a short demo: the live site on your phone and one real listing done for them.
4. Decide how you'll upload their listings (CSV import, or their account), and ask for written permission to publish their photos.
5. Start with warm contacts (20 a day), then cold outreach to brokers already advertising (50–100 a day), and track everything on the Growth page.

Then: once real listings cover Beirut's main areas, switch off demo mode, so renters see only real homes and the dashboard shows only real numbers.
